**The washing experts –
Stronger together!**

Waschanlagen Vertriebs GmbH

BHB washing technology – The perfect hardware

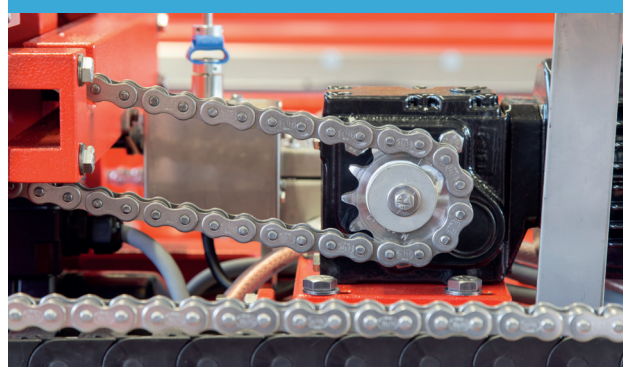

- Complete solution for the user.
- Consultation and planning for wash systems and water conditioning systems according to local conditions.

Excellent machine quality

- Quieter, more durable and low-wear running thanks to robust and innovative machine technology.
- Smooth machine operation thanks to stainless steel connection elements, approved screw locks and multiple-bearing axes.
- Top quality thanks to use of drives, bearings and sensors from leading German manufacturers.

Flexibility in use

- Adjustments and extensions possible at any time with modular component design.
- Open controls allow you to wash a wide range of vehicle geometries with a single machine.
- Collection of operating and wash data, systematic billing and remote maintenance with custom control systems via display, touchscreen and PC.

Cost reduction

- Fixed and calculable costs thanks to optimised material selection, solid processing and low energy requirements.
- Resistant to acids and lyes, and best protected against rust thanks to special pre-treatments and coating of steel parts.

100% odour-free recycling water thanks to our own water conditioning systems with approval number and no added chemical products!

Optimum wash system settings guarantee outstanding wash results

- Technicians from BHB and chemists from nextzett on site together.
- Always the perfect product for the system in the correct dosage.
- Customer satisfaction is always the aim and always the result.

Service

- System analysis and inventory.
- Development of a wash concept tailored to the system.
- Fine system adjustment, wash tests and quality checking.
- Creation of a hazardous substances register.
- Waste water analyses, sampling in line with DIN standard, legally secure analyses by accredited and certified laboratory.
- System and guide for keeping an operational diary.
- Support for affairs with authorities, implementation of statutory waste water provisions.

Environment

- Approvals for system, waste water and environmental engineering.
- Process optimisation in waste water conditioning, adjustment of waste water conditioning systems.

- Use of verifiable, ecologically sound and easily biodegradable raw materials.
- High levels of process water recycling.
- Combination of biological and mechanical water conditioning, aeration/filtration.
- Reliable neutralisation of waste water before entry into channel.
- Solutions safe for material and the environment.

Reduction of costs per vehicle wash with our dosing technology

- Perfect cleaning agent dosing: as little as possible, as much as required!
- Automated cleaning agent dosing reduces costs.

- No incorrect dosings.
- Use of diluted products only increases work safety.
- Constantly low consumption of cleaning agent and safe operation.
- Significantly lower waste water load.
- Simple assembly and safe operation.
- Suitable for all nextzett/SC products.
